SUMMARY

Cloud, DevOps, and AI engineer with hands-on experience shipping production ML models and delivering end-to-end AWS infrastructure and Kubernetes deployments. Currently building agentic tooling for Kubernetes diagnostics, root-cause analysis, automated patching, cost optimization, and multi-framework cloud security compliance at BusinessNext.

SKILLS

Cloud & Infrastructure: AWS IAM, S3, EC2, SSM, EKS, VPC, Site-to-Site VPN, ALB, ACM Certificates, ElastiCache, CloudWatch
Kubernetes: StatefulSets, Deployments, Pods, Ingress, Secrets, ConfigMaps
DevOps & Automation: Jenkins, CI/CD Pipelines, Automated Patching, Cost Optimization, Bash
Observability & RCA: Prometheus, Grafana, Kibana, Root Cause Analysis
Security & Compliance: Cloud Security Posture Management, CIS Benchmarks, AWS FSBP, PCI-DSS, NIST, Finding Remediation
AI / ML Engineering: Model Training & Deployment, Computer Vision, NLP, Hugging Face, LLM Agents
Languages & Tools: Python, Git, Linux

EXPERIENCE

Cloud & DevOps Engineer · AI Engineer — BusinessNext

2025 – Present

- **Automated Patching:** Built an automated patching pipeline on Jenkins spanning EKS clusters, EC2 instances, and ElastiCache, enabling smooth, low-risk patch rollouts.
- **Security Compliance:** Enforce cloud security compliance across AWS against standards such as CIS Benchmarks, AWS FSBP, PCI-DSS, and NIST — identifying and remediating misconfigurations to keep environments audit-ready.
- **Guardex Agent:** Developing a cloud security compliance agent that automatically remediates findings to keep infrastructure continuously secure.
- **RCA Bot:** Developing a root-cause analysis bot integrated with Prometheus, Grafana, Kibana, and CloudWatch to pinpoint the root cause of incidents and recommend concrete resolutions.
- **Cost Optimization Tool:** Building a tool to identify underutilized resources and reduce unnecessary AWS spend across the infrastructure.
- **End-to-End Infra Deployment:** Delivered client infrastructure on AWS — provisioning IAM, S3, EC2, SSM, EKS, VPC networking, site-to-site VPN tunnels, ALB, and certificates — and deployed workloads on Kubernetes using StatefulSets, Deployments, Pods, Ingress, Secrets, and ConfigMaps.
- **Kubernetes Diagnostic Agent:** Building an agent that reads live cluster activity, explains what went wrong, and recommends the exact next action in plain, human-readable language.
- **BI Platform Management:** Upgraded Redash via Helm charts and implemented Superset and Metabase end-to-end, solely owning and managing these business-intelligence platforms across the organization.

AI Engineer — Visacent
Jan 2025 – Jun 2025

- **Face Recognition Model:** Designed and trained a face recognition model using OpenCV, dlib, and face_recognition, published on Hugging Face.
- **Image Blur Model:** Built an image-blurring model using OpenCV and Pillow to automatically detect and blur selected regions in images, published on Hugging Face.
- **Embassy Scraper:** Built a web scraper using BeautifulSoup, Scrapy, and Selenium to extract and structure embassy website data, published on Hugging Face.
- **Broken-Image Checker:** Built a tool using Requests, BeautifulSoup, and Pillow to detect broken or missing images on websites, published on Hugging Face.
- **Reviews Analyzer:** Built a model using NLTK, spaCy, and Hugging Face Transformers to analyze customer reviews for sentiment and key insights, published on Hugging Face.

R&D Developer — Intern — Cadence
Jul 2024 – Dec 2024

- **Test Case Automation:** Built a Python script that automatically synced test cases with ongoing code changes, eliminating manual copy-paste work and reducing the team's test-maintenance effort by up to 90%.
- **Virtuoso UI Refactor:** Refactored the Cadence Virtuoso UI, adding key buttons to improve usability and streamline workflows.

Python Developer — Sai Products and Grafiqs
Nov 2021 – Oct 2022

- **Website Translation Tool:** Built a tool that automatically translates website content into any target language, enabling multilingual access without duplicating content, deployed on Hugging Face.

EDUCATION

B.Tech, Computer Science & Design — Galgotias College of Engineering and Technology (AKTU)
CGPA 8.64 · First Distinction | 2022 – 2025

Diploma, Computer Science Engineering — Galgotias University
98.7% · Gold Medalist | 2019 – 2022

ACHIEVEMENTS

- Gold Medalist, Diploma in Computer Science Engineering (98.7%).
- First Distinction, B.Tech in Computer Science & Design (CGPA 8.64).
- Designed, trained, and deployed 5 production AI/ML models live on Hugging Face.
