ANUSHKA ARORA

Noida • officialanushka250103@gmail.com•8077150076•Github•LinkedIn • Huggining Face

Python Developer 2.8+ yr Exp.

SKILLS

- **Technical** - C++,React, Python, Machine Learning throughPython,Basicsof DeepLearning, PromptEnhineering, LangChain, GEN AI, Bash, Perforce, Docker , Kubernetes, AWS, GCP, Git, Prometheus, Grafana, EFK,

WORK EXPERIENCE

AI-OPS ENGINEER (Python), BUSINESSNEXT (ON-SITE) **July 2025 - Present**

- ***RCA BOT***

  Technologies: Python, Langchain , Grafana , EFK, Prometheus, Gemini, AWS, React

  Description:
  - Built an automated RCA Bot integrating Prometheus, Grafana, and EFK to analyze alerts and generate root-cause insights. Developed a dynamic data-fetch pipeline with LLM-based analysis for accurate issue resolution.
- ***Cost Explorer Tools***

  Technologies: Python, Playwright, Requests, Langchain Framework, Ollama (Mistral model)

  Description:
  - Built a Cost Explorer tool using Streamlit and AWS APIs to visualize, analyze, and track cloud spending. Implemented automated cost insights and breakdowns for services, accounts, and time ranges.

PYTHON DEVELOPER , VISACENT (ON-SITE) **January 2025 - June 2025**

- ***RAG Based AI Model***

  Technologies: Python, Playwright, Requests, Langchain Framework, Ollama (Mistral model)

  Description:
  - Developed a RAG-based model leveraging the LangChain framework to extract information from websites, enabling prompt-based responses based on learned data.
  - Utilized key LangChain libraries, including Prompt Template, LLMs, Chains, Hugging Face Embeddings, and a Vector Database to enhance the model's performance and accuracy in information retrieval.
- ***Editorial Image Link Checker***

  Technologies: Python, BeautifulSoup, Fitz Requests

  Description:
  - Created a Python tool to detect editorial image links in websites and PDFs using BeautifulSoup and PyMuPDF.
  - Enabled compliance checks by identifying and classifying image URLs based on licensing standards.
- ***Website Translation Tool (Machine Learning-Based)***

  Technologies: Python, BeautifulSoup, Requests

  Description:
  - Built a Python-based tool to translate entire websites using machine learning and HTML parsing with BeautifulSoup.
  - Automated multilingual support by extracting, translating, and rewriting dynamic web content efficiently.
- ***Face Recognition and Matching Tool***

  Technologies: Python, face-recognition library, dlib

  Description:
  - Developed a facial recognition tool using the library to match and extract instances of a query face from a dataset.
  - Automated facial encoding and comparison to identify and isolate matching images for analysis or reuse.
- ***Passport OCR Tool***

  Technologies: Python, PaddleOCR

  Description:
  - Built an OCR tool using Paddle OCR to extract structured data from passport images, including the MRZ.
  - Automated identity verification by accurately parsing key passport fields for secure data processing.

SOFTWARE DEVELOPER (R&D) INTERN , CADENCE (ON- SITE) July 2024 - Dec 2024

- ***Test FileAutomationScript***
  Technologies: Python, OS module, Shutil
  Description:
  - Developed a Python script to automate copying and updating test case files, reducing manual effort by 90%.
  - Streamlined the testing workflow using Python's and modules to handle repetitive file operations efficiently.
- ***Log Reordering - Virtuoso Tool***
  Technologies: C/C++, Log Parsing, Shell
  Description:
  - Modified the source code of the Virtuoso tool to implement log reordering, improving traceability and debugging efficiency.
  - Enhanced tool performance by restructuring and prioritizing log output logic for better analysis.

PYTHON DEVELOPER, SAI PRODUCT & GRAFIQ (ON-SITE) November 2021- October 2022

- ***Website Translation Automation Tool***
  Technologies: Python, BeautifulSoup,HTMLParsing
  Description:
  - Developed a Python tool using BeautifulSoup to translate entire websites by parsing and rewriting selected HTML elements. Enabled multilingual support without external APIs, improving international
  - accessibility and reducing manual translation effort.

CERTIFICATION

- PYTHON- PWC
- ORACLE -PWC
- JAVA - PWC
- ChatGPT- Udemy

EDUCATION

B.Tech in Computer Science & Engineering (89.6 %) Dr. APJ Abdul Kalam Technical University (Galgotia College) November 2022- May 2025

Diploma in Computer Science & Engineering (98.7 %) Galgotias University, Greater Noida August 2019 - July 2022

COLLEGE PROJECTS

- ***SMARTDUSTBINUSING IOT AND ML***
  - This smart dustbin combines hardware (Arduino Uno) and software (ML with a CNN model) to enhance waste management. Using sensors, the lid opens automatically when a person approaches.
  - A CNN model classifies waste into recyclable or non-recyclable categories, guiding the bin's lid to open for the appropriate compartment.
- ***E-CLINIC WEBSITE***
  - A website that helps to connect the patients and doctors . Uses html, CSS, js, reactjs in Frontend and node.js and MySQL in back-end Took the data set from physionet

ADDITIONAL INFORMATION

- **Languages:**English, Hindi,German
- **Publications:** Smart Dustbin Using Iot (Under Publication)
- **Awards/Activities:**
  - Received the "Gold Medal" in Diploma for outstanding performance in Academics.
  - Received 3rd position in Techno-fest(college level) for our project "Smart dustbin using IOT & ML"
